

# Eaves Beam - Load Charts

**Use of the load charts**

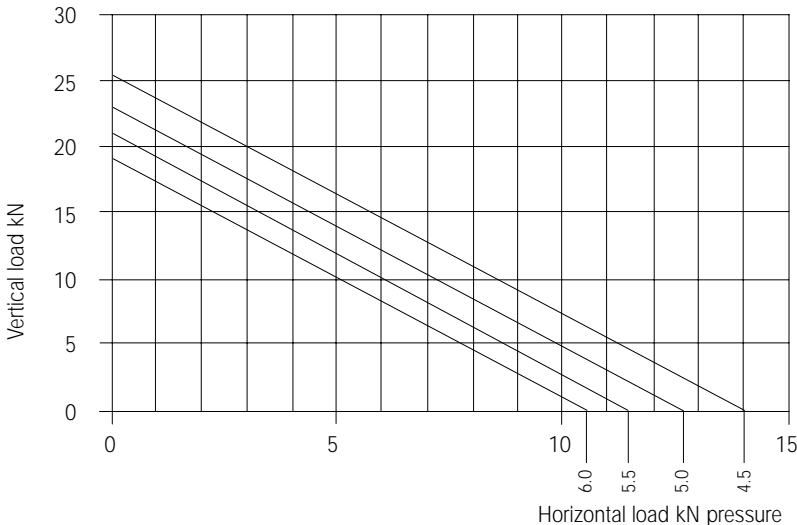

The vertical uplift capacity of the Eaves Beam is shown along the vertical axis and the horizontal capacity due to a positive pressure load along the horizontal axis. The diagonal lines marked with the span, show for each section how the vertical and horizontal loads interact.

The horizontal suction capacity for the Eaves Beam is higher than that shown for the pressure value so when comparing horizontal suction loads multiply the suction load by 0.67% and use this value in the table.

**E185140** 3.0m to 6.0m span

**E215170** 4.5m to 6.0m span

**E265150** 4.5m to 6.0m span
